EXP4

PROJECT PROPOSAL AND OBJECTIVE

Objective: To develop an Online Clipboard application using Spring Boot that allows users to store, manage, and share text snippets securely across multiple devices.

Scope: The system aims to provide a centralized text storage accessible via a web interface with authentication and real-time synchronization.

Features Proposed: - User authentication and session management - Create, update, and delete clipboard entries - Access clipboard content on any device - Simple UI with responsive design

Outcome: This document defines the vision and goals of the Online Clipboard project. It lays the foundation for the design and development process.
